Quiz
Question 1

1/1 point (graded)
The SUMX function takes in two parameters. What is the second parameter?

○ The table containing the rows for which the expression will be evaluated.

◉ The expression to be evaluated for each row of the table. ✔

○ A comma separated list of Boolean expression that defines a filter.

○ A table expression that defines a filter.

| Submit | You have used 1 of 2 attempts

Question 2

1/1 point (graded)
Consider a table named FactInternetSales that has the following columns and data types: Quantity (Whole Number), List Price (Decimal Number), and a calculated column: Revenue (Decimal Number). The Revenue column is calculated by multiplying Quantity and List Price.

Which **two** DAX statements below create a measure that calculates the total revenue that correctly filters by any other columns in the data model?

☑ SUM(FactInternetSales[Revenue])

☑ SUMX(FactInternetSales,FactInternetSales[Quantity]*FactInternetSales[List Price])

☐ SUM(FactInternetSales[Quantity])*SUM(FactInternetSales[List Price])

☐ CALCULATE(SUM(FactInternetSales[Revenue]),ALL(FactInternetSales))

✔

Submit   You have used 1 of 2 attempts

Question 3

1/1 point (graded)
What is the advantage of using the DIVIDE function over the "/" operator?

○ To make the expression more readable

○ To write a shorter expression

○ To speed up calculation time

⦿ To return an alternate result for division by zero ✔

Submit   You have used 1 of 2 attempts

Question 4

1/1 point (graded)

How many mandatory parameters are taken by the CALCULATE function?

- ○ One
- ⦿ Two ✔
- ○ Three
- ○ Four

Submit   You have used 1 of 2 attempts

Question 5

1/1 point (graded)

In the Excel data model, where should you create a measure for a particular table?

(Place the green pointer - the dot - in the appropriate location by clicking your mouse on it)

✔

| Submit | You have used 1 of 2 attempts |
